Projet Tuteurés -Outils de gestion centralisée de machines virtuelles (Tuteur : Lucas Nussbaum)

Sébastien Michaux - Augustin Bocca - Julien Tournois - Mathieu Lamouroux Rapport hebdomadaire - 27 Janvier 2012

Travaux réalisés

1 Création du dépôt Git

Mardi, nous nous sommes penchés sur la création du dépôt Git. Ne connaissant pas ce gestionnaire de versions, il nous a fallut prendre un peu de temps pour maitriser la création du dépot sur GitHub et celle des copies de travail sur chacun des ordinateurs des membres du groupe

Après une semaine d'utilisation, nous sommes désormais plus à l'aise pour la gestion du projet via GitHub. Chaque membre à pu récupérer une copie locale du dépot et des premiers documents sont ainsi partagés. Le projet GitHub est hébergé sur

git://github.com/mat4487/Gestion-de-machines-virtuelles.git

2 Connexion à Grid5000

Jeudi et Vendredi, nous nous sommes penchés sur les tutoriaux du wiki de grid5000. Arrivés au tp2, nous avons pu tester la réservation d'une machine pour l'installation d'un debian lenny. (listing de connexion en annexe)

À poursuivre

3 Git

Le dépot Git étant fonctionnel, il dispose actuellement d'une architecture simple :

/Prenom_Nom -> contiennent les documents de chacun (taches r alis es , tutos ,...)
/rapports -> contient les sources et les pdf de tous les (futurs) rapports
/rapports/parties_rapport -> contient les diff rents fichiers .tex des rapports
/rapports/rapports_hebdo -> contient les sources et pdf des rappots hebdomadaires

Cette organisation sera amenée à être évoluée au fur et à mesure de l'avancement du projet

4 Grid5000

Nous avons pu déployer un premier système sur un noeud de la grille de Nancy. L'objectif va être dans un premier temps la maitrise du déploiement simultanée de plusieurs machines aptes à héberger des machines virtuelles. Problèmes rencontrés

Les principaux obstacles ont étés la compréhension de Git d'une part et de Grid5000 d'autre part. N'étant pas, à l'origine, familiers de ces outils on a passé un peu de temps afin de commencer à avoir une bonne prise en main des outils.

Ces problèmes étant maintenant résolu nous n'avons pas de blocage pour l'instant.

Sources

www.grid5000.fr: le wiki disponible sur le site internet de grid5000 fut notre principale source de renseignements pour le démarrage du projet.

www.loria.fr/lnussbau/: nous avons pu y consulter des anciens projets sur Grid5000 ce qui nous a permis d'avoir un premier aperçu de ses possibilités. Listings

A Connexion à Grid5000

Connexion à Grid5000 et déploiement d'une machine virtuelle Debian Lenny
